ADDENDUM #1

Invitation to Quote (ITQ) – Western Climbing Trail Project
Addendum Issue Date: Feb 21, 2019
ITQ Closing Date: Before 3:00pm March 6, 2019

Information for Contractors: The following information is provided to potential Contractors in response to questions raised. This Addendum #1 contains 1 page.

Question #1: Will UROC consider quotes that propose the use of machinery to assist in trail construction?

Answer #1: Yes, UROC would consider quotes that propose the use of machinery in their workplan. In order to be considered, contractors must provide evidence of experience and techniques for utilizing machinery in trail construction that will produce a final trail product that matches the overall aesthetic and specifications of the hand-built trail requirements listed in the ITQ. In addition, the final trail product should not require machine use for ongoing maintenance needs. If contractors would like to propose the use of machinery in their quote, they must complete the “Machine Use Proposal” forms that will be posted to the UROC website and submit those in addition to the required forms in the original ITQ Package.

Update #1: “Machine Use Proposal” forms will be posted to the UROC website and available for download.

Question #2: Can UROC provide an overall budget amount for use in planning for ITQ bids?

Answer #2: No, in the interest of soliciting competitive bids, UROC will not provide an overall budget. However, the overall length of the final trail constructed may be modified in negotiations based on the bids received.

Question #3: Can UROC provide GPS files indicating the general proposed alignment of the climbing trail to assist bidders in developing quotes?

Answer #3: Yes, UROC can provide GPS files that represent roughly the proposed alignment of the climbing trail. Final trail alignment will be determined after contract negotiations are complete and project has commenced. Please email manager@unitedridersofcumberland.com to request these files. Please also note that the provided map in the ITQ Package is geo-referenced and can be uploaded for use in properly equipped applications.

All Addenda will become part of the Contract documents.
